

Automata Labs

Simplifying labs.
Empowering humans.

Overview

Automata Labs is the most accessible lab automation platform on the market, empowering life sciences labs to achieve more reliable, faster results than ever before.

The benefits

Scalability

Traceability

Accessibility

What's included?

Comprising proprietary hardware, cloud-based management software and a world-class service, Automata Labs is a lab automation platform that makes scaling-up accessible to labs of all shapes and sizes.

Modular Pods

The pods are modular units that perform the assays. Housing a robotic arm that operates tried-and-tested lab equipment, multiple pods can seamlessly integrate into larger protocols, increasing lab efficiency.

Management Platform

Our management software schedules and orchestrates the protocols from a single platform. It captures and stores important data from our pods, which enhances reproducibility. And it's cloud-based, so you can monitor your lab from anywhere at any time.

Managed Service

Hefty upfront fees can make automation inaccessible for labs that would like to scale. That's why we've broken our service cost down into manageable monthly instalments - providing you with ongoing support from proof of concept to deployment and beyond.
